```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

requests: clonerequery@sanger.ac.uk

on Apr 12, 2001 this sequence version replaced gi:13276997.

During sequence assembly date is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate

chemistry or covered by high quality date (i.e., phred quality >=

30); an attempt was made to resolve all sequencing problems, such

as compressions and repeats; all regions were covered by at least

one plasmid subclone or more than one M13 subclone; and the

assembly was confirmed by restriction digest. The following

abbreviations are used to associate primary accession numbers given

in the feature table with their source databases: Em:, EMBL; Sw:,
                                                                                                                                                                                                                                                                                                                                                                                                                   3298

SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 13. constructed by the Sanger Centre Chromosome 13
Apping Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr13
RP11-178C10 is from the hibrary RPCI-11.1 constructed by the group
of Pieter de Jong. Por further details see
http://www.chori.org/bacpac/home.htm
VECTOR: PBACB.3.
IMPORTANT: This sequence is not the entire insert of clone
RP11-178C10 It may be shorter because we sequence overlapping
sections only once, except for a 100 base overlap.
The true right end of clone RP11-178C10 is at 1988c1 in this
sequence. The true right end of clone RP11-178C103 is at 100 in this

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

1 (bases 1 to 151174)

Birren, B., Linton, L., Nusbaum, C. and Lander, B.

Homo sapiens, clone RPII-23M9

1 (bases)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               * NOTE: This record contains 152 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                851: contig of 851 bp in length 951: gap of 100 bp 1904: contig of 853 bp in length 1904: gap of 100 bp 2719: contig of 815 bp in length 2819: gap of 100 bp 2819: gap of 100 bp 4557: contig of 849 bp in length 4757: gap of 100 bp 5500: contig of 843 bp in length 5700: contig of 843 bp in length 5500: contig of 843 bp in length 5500: contig of 843 bp in length 6532: contig of 843 bp in length 6532: gap of 100 bp 7481: contig of 849 bp in length 7481: contig of 849 bp in length 8547: gap of 100 bp 9183: contig of 846 bp in length 9433: gap of 100 bp 9183: contig of 836 bp in length 10342: gap of 100 bp 100 bp 10342: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 100 bp 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap of 10142: gap

Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the piaces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Direct Submission

Derived from rice genomic sequences generated from the Monsanto
Rice Genome Sequencing project. Please see
http://www.rice-research.org for more information. The sequence
data were produced primarily in the laboratories of Dr. Leroy Hood
at the University of Washington in Seattle.

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will

* be preserved.

LOCUS DEFINITION ACCESSION VERSION

RESULT 14 AC140499

```
and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.

The nucleotide sequence of this BAC clone was generated by
combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 contigs. Gaps between the contigs
are represented as runs of N. The order of the gaps between them
to be correct as given, however the sizes of the gaps between them
are based on estimates that have provided by the submitter. This
sequence will be replaced by the finished sequence as soon as it is
available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1. .98286.

Casman SJ, Edinger SR, Ellerman K, Smithson G, Kekuda R; Muralidhara P;

WPI; 2002-643487/69. P-PSDB; ABG32286.

New isolated G protein coupled receptor polypeptides and polynucleotides, useful in gene therapy, particularly for treating or preventing cardiomyopathy, atherosclerosis, diabetes, multiple sclerosis, Crohn's disease or cancer.

                                                                                                                                                                                                                                                                   ઠે
                                                                   Thus interior relates to a new isolated or protein coupled relative to a new isolated or protein coupled relative to a new isolated or are useful for treating, preventing or alteviating a GPCRX-associated disorder or a pathological state in a subject, particularly a human. In particular, the disorder is cardiomyopathy, atherosolatosis, diabetes, or a disorder related to cell signal processing and metabolic pathway or disorder related to cell signal processing and metabolic pathway or a disorder related to cell signal processing and metabolic pathway and a disorder related to cell signal processing and metabolic pathway or a disorder related to cell signal processing and metabolic pathway altered levels of GPCRX, particularly cancer. The GPCRX mucleic acid and cell appearant of prophylactic applications for disorders associated with a lererad levels of general pathological in the manufacture of a medicament for therapeutic or prophylactic applications for disorders associated with aberrant GPCRX expression or activity, e.g. von Hippel-Lindau syndrome, altered signal and states, attached signal and syndrome, and sease, serebral palsy, epilepsy, certain syndrome, multiple sclerosis, ataxia-telangicatasia, lesch-Nyhan syndrome, multiple sclerosis, ataxia-telangicatasia, chypartension, scleroderma, haemophila, asthma, arthritis, human immunodeficiency virus; autoimmune disease, HIV viral, fungal, bacterial or protein is useful in gene therapy for treating the above conditions. The polypeptides can be used as immunogens to produce antibodies and as vaccines. The publications, or graft-versus -host protein special analysis of various human dispersents the above conditions. Chromosome mapping, tissue typing, preventive medicine, and dispersent special analysis of various human disorders, as well as in chirantical analysis of various human dispersents the above conditions in the present sequence represents the above conditions in the present sequence represents the above conditions in the protein coupled receptor relate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 576
                                                                                     The invention relates to a novel polynucleotide encoding a guanosine triphosphare-binding protein coupled receptor (GPCR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphare-binding protein coupled receptor. The polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
                                                                                                                                                                                                                                                                                                                                                                                                                                         336
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            396

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)

controlled and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
controlled the activity of mutations or deletions in a patient's genome
that affect the activity of mutations or deletions in a patient's genome
that affect the activity of mutations or deletions in a patient's genome
that affect the activity of mutations or deletions in a patient's genome
concerns and post of (I) by expressing inactive proteins or to
polynucleotides may be used to produce the secreted (I), by inserting the
concern acids into a host cell and culturing the cell to express the
concerns and cancer metastesses of haematopoietic-related diseases, especially
concerns and cancer metastesses of haematopoietic-derived cells. AAK64703

The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCN) polymuclectides included in the specification. Also included are probes based on the GPCN sequence (including antiesnes probes), a host cell comprising an expression vector comprising the GPCN sequence, and methods of identifying modulators of the polypeptides. The polypeptides are useful for identifying modulators of the polypeptides. The polypeptides are useful for repressors, agonists or antagonists of the novel GPCN polypeptides in cluding the GAL4 polypeptide. The antibodies and nucleic acid probes as described above can be used to detect the presence of the polypeptides and nucleic acids and are used to diagnose a variety of disease, or anyotrophic lateral solerosis, asthma, atherosclerosis, basal cell carcinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic obstructive pulmonary disease, (cronic diseases, depression, epilepsy, macular degeneration, lymphoma, melanoma, multiple sclerosis, and many other diseases listed in the specification. The probes and antibodies are also useful for diagnosing cognition and memory disorders, pain perception release disorders, cardiovascular activity disorders, pain perception

disorders, obesity, diabetes, Alzheimer's disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) can be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is a novel GPCR polynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                        159

The invention relates to human novel polymucleotides and associated polypeptides. The polymucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, neptril for treating inflammatory conditions such as arthritis, neptril for disease, ischaemia-reperfusion injury, shock, sepsis, immune responses and cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and regeneration of nerve and brain tissue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzhaimer's disease, Parkinson's disease, Huntington's disease and amyotrophic lateral sclerosis. The sequences are involved in chemotactic or chemokinetic activity, regulation of haematopoiesis, treatment of myeloid or lymphoid cell disorders and platelet disorders such as thromborytopenia, regeneration of bone, cartilage, treadment igament and/or nerve tissue cell disorders and platelet disorders such as thromborytopenia, regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth tissue repair, healing of burns, incisions, ulcers, treatment of osteoprorsis, osteoarthritis, bone degenerative disorders and periodontal disease. The sequences of the invention are also useful for gut protection or regeneration and treatment of lung or liver fibrosis, including severe combined immunodeficiency (SCID), bacterial or fungal infections, allergic conditions such as asthma, thrombolysis or thrombosis and coagulation disorders. Sequences ABK94890-ABK94892 represent human companies and coagulation disorders. Sequences and the novel polymucleotides of the invention Novel nucleic acids and polypeptides for diagnosis, treatment of inflammatory, autoimmune, nervous system, myeloid or lymphoid cell disorders, cancer and promoting wound healing. Claim 1; Page 403-404; 672pp; English.

Novel G protein-coupled receptor polypeptides including galanin receptor polypeptides useful for identifying modulators that are useful for treating Alzheimer's disease, psoriasis, melanoma, multiple sclerosis, stroke

Claim 2; Page 83; 144pp; English.

The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polynucleotides included in the specification. Also included are probes based on the GPCR sequences (including antisense probes), a host

MON Feb 43 11:38:46

us-10-041-615-33.01110.rng

cell comprising an expression vector comprising the GPCR sequence, antibodies raised against the polypeptides, and methods of identifying modulators of the polypeptides. The polypeptides are useful for identifying modulator compounds which function as modulators, activators, represence, agonists or antagonists of the novel GPCR polypeptides including the GAL4 polypeptide. The antibodies and nucleic acid probes as confidentially polypeptide. The antibodies and nucleic acid probes of an nucleic acids and are used to diagnose a variety of diseases, an unbedders in which GPCRs are involved e.g., Alzheimer's disease, anyotrophic lateral sclerosis, astuma, atherosclerosis, basal cell carcinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic carcinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic carcinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic carcinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic carcinoma, breast carcinoma, falsease, depression, epilepsy, macular degeneration, lymphoma, melanoma, multiple sclerosis, costeoarthritis, osteoporosis, Parkinson's disease, psoriasis, rheumatoid diseases listed in the specification. The probes and antibodies are also useful for diagnosing cognition and memory disorders, pain perception classes disorders, cardiovascular activity disorders, pain perception classocares or increase the expression of galanin receptor (GAL4) can be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is a novel GPCR polymucleotide.

Tang YT; Drmanac RT, Liu C,

WPI; 2001-639362/73 P-PSDB; ABG14682 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

Claim 1; SEQ ID NO 14673; 103pp; English.

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGN) primers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in game therapy techniques to restore normal crivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in diagnostics for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences AAS64197-AAS94564 represent novel human diagnostic conding sequences of the invention. Note: The sequence data for this pattent did not appear in the printed specification, but was obtained in partner of the condition of the condition and the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The protein and DNA sequences of the invention can be used to identify compounds which bind to GPCR polypeptides and in screening

for compounds that modulate GPCR activity. By screening a human subject thor the presence of mutations in GPCR DNA, a GPCR related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, demental and bipolar disorder, neurological disorders such as Huntington's disease, Parkinson's disease and Tourette's syndrome, metabolic disorders such as thrombosis, moccardial infeation, cardiovascular disorders such as thrombosis, myocardial infeation, cardiomyopathy and atherosclerossis, viral infections caused by HIV and cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gococorcracerengo en a respensa de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constanta de la constant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel isolated nucleic acid molecules encoding G protein-coupled receptors termed nGPCR-x. nGPCR-x polymucleotides, polymulators may be used in the treatment of diseases and conditions such as infections, such as viral infections caused by HIV-1 (human immunodeficiency virus) or HIV-2, pain, cancers, metabolic and cardiovascular diseases and disorders (e.g., type 2 diabetes, obesity, anorexia, hypotension, hypotension, myocardial infarction, atheroselerosis), Parkinson's disease, and psychotic and neurological disorders, including schizophrenia, migraine, major depression, anxiety, mental disorder, manic depression, and dyskinesias, such as Huntington's listed in the specification. nGPCR-x polynucleotides and polypeptides, seell diseases or Tourette's Syndrome and many other diseases and syndromes well as nGPCR-x modulators, may also be used in diagnostic assays for souch diseases to conditions. The present sequence encodes a G protein-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   756
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     816
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    876

The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polymucleotided in the specification. Also included are probes based on the GPCR sequences (including antisense probes), a host cell comprising an expression vector comprising the GPCR sequence.

Contibodies raised against the polypeptides, and methods of identifying modulators of the polypeptides are useful for identifying modulator compounds which function as modulators, activators, repressors, against the polypeptides and mucleic acid probes as including the GAL4 polypeptide. The antibodies and nucleic acid probes as continually are used to disense of the polypeptides and nucleic acids and are used to disense and nucleic acid probes as including the GAL4 polypeptide. The antibodies and nucleic acid probes as continually are used to disense and nucleic acid sprobes as including the GAL4 polypeptide. The antibodies and nucleic acid sprobes as continually are involved e.g., Alzheimer's disease.

Continually defense in which GPCRs are involved e.g., Alzheimer's disease.

Continually degeneration, lymphoma, melanoma, multiple sclerosis, continually disease is listed in the specification. The probes and antibodies are also artharitis, schizophrenia ulcrative collitis, tuberculosis and many other diseases listed in the specification. The probes and antibodies are also disorders, obesity, diabetes, Alzheimer's disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) can be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR collection of the present sequence is a novel GPCR polynuclectide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              349
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              530 CTTTCGGCAAGGGGCTCTGCAGGCTGACGGCGTTTGTGCTCTACACCGACACCTACGGGG 471

```

Homo sapiens.

```
Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; foetal liver; gene expression; single exon nucleic acid probe; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2.8%; Score 31; DB 4; Length 232; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal aland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenical; (b) immune consisting autoimmune thyroidmits, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumacoid arthritis and ulcerative colifis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases such as wiral, bacterial, fungal and parasatic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Probe #12384 for gene expression analysis in human cervical cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Probe, human, microarray; gene expression, cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 22760 BP; 5353 A; 6538 C; 6154 G; 4715 T; 0 U; 0 Other;

Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta.
                                                                                                                                                                                                                         The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foctal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                             Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Probe #16429 used to measure gene expression in human placenta sample.
                                                                                                                                                                                             Claim 4; SEQ ID NO 15832; 639pp + Sequence Listing; English

The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from maNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nseful
                               The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; microarray; single exon probe; gene expression; breast; disease;

GENERAL INFORMATION:
APPLICANT: Lees, Ann M.
APPLICANT: Lees, Robert S.
APPLICANT: Lees, Robert S.
APPLICANT: Lees, Robert S.
APPLICANT: Lew Jamon W.
TITLE OF INVENTION: NOVEL LOW DENSITY LIPOPROTEIN BINDING
TITLE OF INVENTION: PROTEINS AND THEIR USE IN DIAGNOSING AND TREATING
TITLE OF INVENTION: ATHEROSCLEROSIS
FILE REPRENCE: 10797-004001
CURRENT APPLICATION NUMBER: US/09/616,289
CURRENT APPLICATION NUMBER: US 09/517,849
PRIOR FILING DATE: 2000-03-02
PRIOR FILING DATE: 1997-11-26
PRIOR APPLICATION NUMBER: US 60/031,930
PRIOR FILING DATE: 1997-06-03
NUMBER OF SEQ ID NOS: 53
SOFTWARE: PRACESC for Windows Version 4.0
SEQ ID NO 48
LENGTH: 2561
TYPE: DAA
ORGANISM: Oryctolagus cuniculus
